                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         seq length: 0

                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to identifying compounds, that modulate interaction between caspase recruitment domain (CARD)-7 and CARD-5. The method involves measuring the binding of CARD-7 and CARD-5 in the presence of the compound (an increase in the binding of CARD-7 to CARD-5 in the presence of the compound indicates that the compound is a modulator of CARD-7 in the compound indicates that the compound is a modulator of CARD-7-CARD-5 interaction). Modulators of CARD-7 and CARD-8 expression or activity can be used to treat or diagnose disorders such as cancers, bacterial or viral infections, autoimmune disorders (systemic lupus erythematosus, immune-mediated glomerulonephritis or arthritis), inflammatory disorders, organ-specific autoimmunity including multiple sclerosis, Hashimoto's thyroiditis, or Grave's disease, psoriassis, graft rejection, allergies. CARD-7 and CARD-8 are useful as modulating agents in regulating a variety of cellular processes including cell growth and cell death. The present sequence represents the human CARD-7, an intracellular protein.
                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                    The invention describes nucleic acids encoding human leucine-rich repeat containing proteins expressed in nervous system tissues, HLRRNS1. The HLRRNS1 polypeptide or the polynucleotide is useful for preventing, treating, or ameliorating a neural disorder or a disorder related to aberrant apoptosis modulation (either directly or indirectly), renal disorder, immune disorder (e.g. arthritis, asthma, acquired immunodeficiency syndrome (AIDS) or rheumatoid arthritis), haematopoietic, metabolic, reproductive, pulmonary or cardiovascular diseases, hyperproliferative disorders, neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease or Huntington's disease), developmental disorders, non-infections disorders, nervous extern diseases, nearly additionates, nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;
                                                                                                                                                                                                                    system diseases and/or disorders, and autoimmune diseases (e.g. Addison's disease, haemolytic anaemia, antiphospholipid syndrome, or allergic encephalomyelitis). The polynucleotides are also useful as chromosome markers, for chromosome identification, gene therapy, and in identifying organisms from minute biological samples. This is the amino acid sequence of a leucine-rich repeat containing protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New HIRRNS1 nucleic acids and polypeptides, useful for preventing, treating, or ameliorating e.g. renal disorder, immune, hematopoietic, metabolic, reproductive, pulmonary, cardiovascular or autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ramanathan C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   03-JAN-2001; 2001US-259479P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; human leucine-rich repeat small intestine I; HLRRSII; asthma; proliferative disorder; gastrointestinal disorder; renal disorder; neural disorder; reproductive disorder; calcium regulation; apoptosis; immune system; anaemia; human immune deficiency virus; HIV; cancer; blood coagulation disorder; autoimmune disorder; allergic reaction; inflammatory condition; cardiovascular disorder; ischaemia; neurological disorder; infectious disease; cytokine production;
The invention relates to isolated nucleic acid molecules (I) encoding human leucine-rich repeat small intestine I (HLRRSII) polypeptides. The nucleic acid molecules and polypeptides are useful for preventing, treating and ameliorating medical conditions, such as proliferative, gastrointestinal, renal, neural, or reproductive disorders; or disorders related to aberrant calcium regulation or apoptosis modulation, either directly or indirectly. They are also useful for treating, preventing and/or diagnosing diseases, disorders and/or conditions of: immune system by activating or inhibiting the proliferation, differentiation, or
                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid molecules encoding HLRRSI1 polypeptides, or their fragments and homologues, useful for preventing, treating and ameliorating medical conditions, e.g. proliferative, gastrointestinal, or renal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABG78472 standard; Protein; 1429

```
cc polynucleotides are useful for preventing, treating or ameliorating a cc medical condition such as a proliferative disorder, immune condition, or cc a disorder related to aberrant apoptosis modulation, either directly or cc indirectly, and in modulating signal transduction activity in various cc cells, tissue and organisms. They are also useful for treating, or disgnosing diseases of haemacopoietic cells, autoimmune cc disease, graft-versus-host disease, allergic conditions (e.g. asthma), cc cardiovascular disorders, and neurological diseases, and for increasing the organisms ability to synthesize and/or release pheromones. The cc polypeptide may also be used in treating, preventing or ameliorating continuity, or bronchial hyperresponsiveness), reproductive disease, allergic chinnits, or bronchial hyperresponsiveness, reproductive disease, haematopoietic disease, platelet disorders (e.g. Bernard-Soulier syndrome), non-infectious disorders (e.g. innate immunity to bacterial pathogens, or adaptive immune response), immune and inflammatory condisorders (e.g. systemic lupus erythematosus), cardiovascular diseases identification or mapping, as a chiromosome marker, as molecular weight markers, as diagnostic probes, in gene therapy, in raising anti-DNA cantibodies, or as antigens for eliciting immune responses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           containing protein, which was used as a probe to search for repeat containing protein HIRRBM1. HIRRBM1 polypeptides and polynucleotides are useful for preventing, treating or amel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New HLRRBM1 nucleic acids for preventing, treating or ameliorating e.g. proliferative disorders, immune conditions, a disorder related to aberrant apoptosis modulation or developmental disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a human leucine-rich repeat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 1; Page 362-366; 371pp; English.

Assays for identifying compound that modulates the interaction caspase recruitment domain-8 with a CARD-8 ligand or a compound modulates activity of CARD-8 of d that

Disclosure; Fig 1; 49pp; English

CC (CARD-7) or caspase recruitment domain-8 (CARD-8). In particular, a compound that modulates the interaction compound for identifying a compound that modulates the interaction compound for identifying a converting enzyme (pseudorICE) or ICEBERG is disclosed. CARD-7 and CC converting enzyme (pseudorICE) or ICEBERG is disclosed. CARD-7 and CC compounds that have the ability to increase/decrease apoptosis, or compounds that have the ability to increase/decrease apoptosis, or compounds that have the ability to increase/decrease apoptosis, or compounds that have the ability to increase/decrease apoptosis are useful for treating a disorder associated with inappropriate apoptosis or inappropriate inflammation. The methods are useful for treating disorders associated with inappropriate apoptosis such as cancer (preferably follicular lymphoma, chronic myelogenous leukaemia, melanoma, colon cancer, lung carcinoma, etc), viral confections, autoimmune diseases caused by low levels of apoptosis conditions at a colon cancer, lung carcinoma, etc), viral conditions are also useful for treating disorders with cundesirably high rates of apoptosis such as human immunodeficiency conjunctivitis, infection, Alzheimer's disease, Parkinson's disease, spinal consistated with chronic disease, aplastic anaemia, chronic neutropaenia, myelodysplastic syndromes, myocardial infarction, stroke, and conversed the condition, altheimer's disease, reactive conjunctivitis, glomerular nephritis, etc). The present sequence conjunctivitis, glomerular nephritis, etc). The present sequence The present invention relates to methods of identifying compounds that regulate caspase activity using caspase recruitment domain-7 (CARD-7) or caspase recruitment domain-8 (CARD-8). In particular, domain-7

The methods are also useful for treating disorders with undesirably high rates of apoptosis such as human immunodeficiency virus (HIV) infection, Alzheimer's disease, Parkinson's disease, amylotrophic lateral sclerosis (ALS), retinitis pigmentosa, spinal muscular atrophy, various forms of the parkins pigmentosa, spinal associated with chronic disease, aplastic anaemia, chronic neutropaenia, myelodysplastic syndromes, myocardial infarction, stroke, and various inflammatory disorders (e.g. Crohn's disease, reactive arthritis, insulin dependent diabetes mellitus, multiple sclerosis, psoriasis, graft rejection, allergic rhinitis, food allergies, psoriasis, glomerular nephritis, etc). The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          between CARD-8 and caspase-1, pseudo-interleukin-1 (IL-1) beta converting enzyme (pseudoICE) or ICEBERG is disclosed. CARD-7 and CARD-8 molecules are useful as modulating agents in regulating a variety of cellular processes including cell growth, cell death, and inflammation. The methods of the invention are useful for identifying compounds that have the ability to increase decrease apoptosis, or comprise the ability to induce caspase activation. The methods are useful for treating a disorder associated with inappropriate apoptosis or inappropriate inflammation. The methods are useful for treating disorders associated with nappropriate apoptosis or inappropriate inflammation. The methods are useful for treating disorders associated with an undesirably low rate of apoptosis such as cancer (preferably follicular lymphoma, chronic myelogenous leukaemia, melanoma, colon cancer, lung carcinoma, etc), viral infections, autoimmune diseases caused by levels of apoptosis infections, autoimmune diseases caused by levels of apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  binding, and altered -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying modulator of CARD-7 and CARD-5 interaction, by contacting CARD-7 and CARD-5 in presence of test compound, measuring their binding, and identifying modulator, when binding of CARD-7 to CARD-5 is

The present sequence is a human NB-ARC and CARD containing protein (NAC) beta isoform. NAC beta isoform represents the NAC splice variant in which both the splice regions are present in the translated polypeptide. NAC protein comprises a nucleotide binding (NB) domain (also referred as NB-ARC domain), a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like domain. The caspases, cysteine aspartyl proteases, are principal effectors of apoptosis. CARD containing NAC proteins are used for screening modulators that modulates apoptosis, cytokine production, cytokine receptor signalling and other cellular processes. NAC can act as an immunogen for the production of polyclonal and monoclonal antibodies. It can also be used to diagnose and treat inflammatory disorders such as sepsia, fibrosis and arthritis and cancer pathologies such as adenocarcinomas and leukaemias.

Note: This sequence is stated as being the same as that shown as captain the same as that shown as sepsia in figure 1a of the specification. However the sequences differ at several positions.

Domain
The present sequence is a human NB-ARC and CARD containing protein (NAC) beta isoform, alternative version. NAC beta isoform represents the NAC splice variant in which both the comprises are present in the translated polypeptide. NAC protein comprises a nucleotide binding (NB) domain (also referred as NB-ARC domain), a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like domain. The caspases, cysteine

CARD containing NAC proteins are used for screening modulators that modulates apoptosis, cytokine production, cytokine receptor signaling and other cellular processes. NAC can act as an immunogen for the production of polyclonal and monoclonal antibodies. It can also be used to diagnose and treat inflammatory disorders such as sepsis, fibrosis and arthritis and cancer pathologies such as adenocarcinomas and leukaemias.

Note: This sequence is stated as being the same as that shown as SEQ ID NO:2 (See AAY72669) in page 133-137 of the specification. However the sequences differ at several positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         181

They are also useful for treating, preventing CC and/or diagnosing diseases, disorders and/or conditions of: immune system CC by activating or inhibiting the proliferation, differentiation, or CC mobilisation of immune cells; haematopoietic cells e.g. thrombocytopenia, CC anaemia; immunologic deficiency syndromes, e.g. human immune deficiency virus (HIV) infection, HTLY-BLV infection; blood coagulation disorders, CC e.g. arterial thrombosis; autoimmune disorders, e.g. Addison's disease, CC myasthenia gravis; asthma or allergic reactions; inflammatory CC conditions, e.g. chronic prostatitis, sepsis; proliferative disorders, e.g. cancer; cardiovascular disorders, e.g. arrhythmia, myocardial isfohaemias, aneurysms; neurological disorders, e.g. Altheimer's disease, CC pneumonia, or viral, bacterial, and fungal infections. The HIRRSI polypeptides are useful for modulating cytokine production, antigen CC presentation, or other processes such as boosting immune responses. CC amino acid sequences of the invention.

These can be used to treat diseases associated with impaired intracellular signal transduction, particularly inflammation such as psoriasis, arteriosclerosis, bacterial or viral infections (particularly meningitis and pneumonia), multiple sclerosis, rheumatoid arthritis, asthma, sarcoidosis, glomerulonephritis and osteoarthritis, and also Alzheimer's and Parkinson's diseases. The present sequence is a protein of the

                    The present sequence is human G-protein coupled receptor-8 (GCREC-8) protein. The present invention relates to GCREC protein and nucleic acids encoding them. GCREC protein, its agonist or antagonist are useful for treating diseases or conditions associated with decreased expression or overexpression of functional GCREC in a patient, where the disorder is selected from cell proliferative disorders such as actinic keratosis, arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, psoriasis, and cancer, neurological disorders such as epilepsy, stroke, Alzheimer's disease, Huntington's disease, Parkinson's disease, cardiovascular disorders such as hypertension, vasculitis, varicose veins, gastro-intestinal disorders such as dysphagia, dyspepsia, anorexia, nausea, pancreatitis, autoimmune/inflammatory disorders such as acquired immunodeficiency syndrome (ALDS), Addison's disease, Crohn's disease, interior disorders such as dyspepsia as acquired instance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nootropic; cerebroprotective; hypotensive; tranquilliser; vulnerary; ophthalmological; cell proliferative disorder; actinic keratosis; anorectic; arteriosclerosis; atherosclerosis; cirrhosis; hepatitis; psoriasis; cancer; neurological disorder; stroke; Alzheimer's disease; Huntington's disease; Parkinson's disease; cardiovascular disorder; epilepsy; hypertension; varicose vein; vasculitis; dysphagia; dyspepsia; anorexia; gastrointestinal disorder; pancreatitis; autoimmune disorder; hddison's disease; Crohn's disease; acquired immune deficiency syndrome; AIDS; uveitis; infection; trauma; metabolic disorder; diabetes; obesity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               02-FEB-2000;

GCREC proteins and their cDNAs are used to assess the effects of exogenous compounds on the expression of GCREC sequences. GCREC cDNA is useful to create knock in humanised animals (pigs) or transgenic animals (mice or rats) to model human disease, for therapeutic or diagnostic purposes, for somatic or germline gene therapy, to generate hybridisation probes useful in mapping the naturally occurring genomic sequence, and in molecular biological

The present sequence is a human NB-ARC and CARD containing protein (NAC) gamma isoform. NAC gamma isoform represents the NAC splice variant in which both the splice regions are absent in the translated polypeptide. NAC protein comprises a nucleotide binding (NB) domain (also referred as NB-ARC domain), a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like domain. The caspases, cysteine aspartyl proteases, are principal effectors of apoptosis. CARD containing NAC proteins are used for screening modulators that modulates apoptosis, cytokine production, cytokine receptor signalling and other cellular processes. NAC can act as an immunogen for the production of polyclonal and monocional antibodies. It can also be used to diagnose and treat inflammatory disorders such as sepsis, fibrosis and arthritis and cancer pathologies such as adenocarcinomas and leukaemias.
                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-183258/18.

The present sequence is a human NB-ARC and CARD containing protein (NAC) delta isoform. NAC delta isoform represents the NAC splice variant in which one of the splice region is absent in the translated polypeptide. NAC protein comprises a nucleotide binding (NB) domain (also referred as NB-ARC domain), a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like domain. The caspases, cysteine aspartyl proteases, are principal effectors of apoptosis. CARD containing NAC proteins are used for screening modulators that modulates apoptosis, cytokine production, cytokine receptor signalling and other cellular processes. NAC can act as an immunogen for the production of polyclonal and monoclonal antibodies. It can also be used to diagnose and treat inflammatory disorders such as sepsis, fibrosis and arthritis and cancer pathologies such as adenocarcinomas and leukaemias.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; NB domain; nucleotide binding domain; NB-ARC and CARD; NAC; caspase-associated recruitment domain; CARD; TIM-Barrel-like domain; cyteine aspartyl protease; apoptosis; cytokine production; cytokine receptor signalling; therapy; inflammatory disorder; sepsis; fibrosis; arthritis; cancer; adenocarcinoma; leukaemia.

Novel nucleic acid encoding NB-ARC and caspase associated recruitment domains, used to produce polypeptides for screening for modulators of

Disclosure; Page 168-172; 184pp; English.

The present sequence is a human NB-ARC and CARD containing protein (NAC) beta isoform-CARD-XI chimeric protein. NAC protein comprises a nucleotide binding (NB) domain (also referred as NB-ARC domain), a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like domain. CARD-X protein comprises a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like domain. The caspases cysteine aspartyl proteases, are principal effectors of apoptosis. NAC and CARD-X are used for screening modulators that modulates apoptosis, cytokine production, cytokine receptor signalling and other capitals processes. They can act as an immungen for the production of polyclonal and monoclonal antibodies. They can also be used to diagnose and treat inflammatory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                domain. CARD-X protein comprises a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like domain. The caspases, cysteine aspartyl proteases, are principal effectors of apoptosis. NAC and CARD-X are used for screening modulators that modulates apoptosis, cytokine production, cytokine receptor signalling and other cellular processes. They can act as an immunogen for the production of polyclonal and monoclonal antibodies. They can also be used to diagnose and treat inflammatory disorders such as sepsis, fibrosis and arthritis and cancer pathologies such as adenocarcinomas and leukaemias.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is a human NB-ARC and CARD containing protein (NAC) gamma or delta isoform-CARD-X1 chimeric protein. NAC protein comprises a nucleotide binding (NB) domain (also referred as NB-ARC domain), a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like
